Steel Tanks

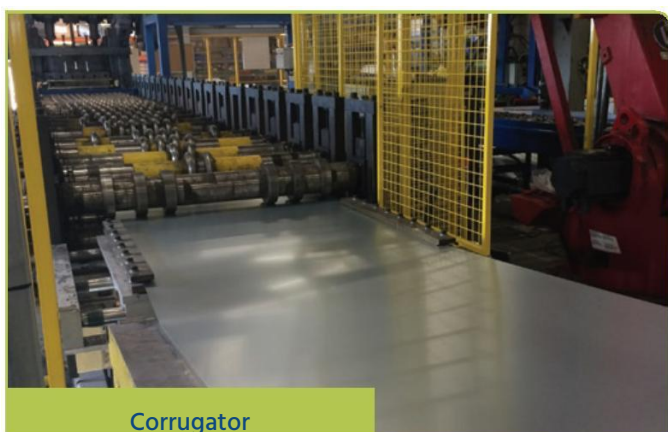

Steel Structure

The supporting steel structure of our tank system is critical to its strength and longevity and is designed to BSEN 10147:2000 with a 40% safety margin.

Steel Coil

We source only the best quality hot dipped galvanised steel on coil.

Corrugator

We corrugate, punch and curve the steel under our controlled ISO9001 quality system.

Steel Panels

Spare Components

Code	Description	Price
SS7801PC	0.8 mm S280 2 Hole	€58.94
SS7802PC	1.0 mm S280 2 Hole	€71.42
SS7822PC	1.0 mm S280 3 Hole	€71.42

FN7460	M12 Hex Full Nut	€0.19
FW7480	M12 MS Washer	€0.07

When ordering – please remember always use 2 washers per set

Anchor Kit

Code	Description	Price
TBAK00	Anchor Kit for 1 panel	€10.06

Liners

FPP 0.6mm Water Tank Liners

FPP – Flexible Polypropylene, has excellent mechanical properties, chemical resistance and UV stability. FPP has the added benefit of holding potable water certification. It is very competitively priced against PVC and EPDM. FPP liners are secured by a ratchet system and are repairable using a heat gun and patch.

PVC 0.5mm Water Tank Liners

PVC is our Budget option for tank lining and can be used for most applications. It is lightweight and easy to handle. It can be repaired using glue and a patch. The liner is secured using rope to the first ring of bolts. Hooks or eyenuts can also be attached to the bolts for added security.

Repair Kits

Code	Description	Price
TLREPP	PVC Liner Repair Kit c/w 60ml tin of Adhesive + 1m2 Patch of Material	€28.35
TLREPFPP	FPP Liner Repair Patch 1.0m ² (requires applied heat)	€14.50
TLTRIFP	TRIAC ST 230V Heatgun c/w euro plug	€1,274.40

Spare Fixings

Side Fleece

Fleece is an optional protection to go between the steel and the liners, never normally used with EPDM. It comes as standard with PVC Liners.

Bottom Fleece

Base fleece can be used as an alternative to sand to protect the liner.

Galvanised Roofs

The fully enclosed Evenproducts galvanised steel roof is designed exclusively for use with our tanks. Using a central hub and purlins the steel cover is extremely strong and highly resistant to wind and snow loading. The roofs are supplied complete with securing straps and two access hatches.

The cover prevents the growth of algae, stops evaporation and acts as a barrier to rainwater and wind borne debris.

The internal roof structure also incorporates a ball float valve support bracket assembly which is height adjustable.

Floating Covers

The Evenproducts woven polypropylene Anti Algae floating cover is tailored to suit the size of each tank. It is made from polypropylene material. It comes with sleeves sewn in to the material to allow PVC or PE pipe to be inserted to allow it to float on the surface of the water. This is currently the only cover available for larger tanks.

Indoor AA Covers

The Evenproducts woven polypropylene indoor Anti Algae cover is tailored to suit the size of each tank. It is made from polypropylene material designed to stop the growth of algae.

Outdoor AA Covers

The Evenproducts woven polypropylene Anti Algae tank cover is tailored to suit the size of each tank. It is made from 220 gm/m² material. 5.49M diameter and above comes with a central supporting pole. A strengthened top seam sits on the top edge with a skirt tightly fitting around the top ring of the tank.

Due to the strength of material and fastenings this is suitable for outdoor use up to 14.63M diameter.

PVC Covers

The Evenproducts PVC water tank cover is designed to cover and overlap the top edge of the tank. The heavy-duty reinforced PVC material prevents algae growth and the ingress of wind-borne debris or rainwater.

A heavy duty tailored PVC water tank cover draped over a centre support structure which is held in position and tensioned throughout, using adjustable PP guy ropes attached to galvanised eye nuts.

The cover is available for all tank sizes from 2.74M to 7.3M and can be supplied to fit any height of tank.

Access Ladder

Designed to provide a safe vertical path between the ground and a flat work platform attached to the ladder at the top of the tank. The ladder has safety hoops at high level and a hand rail around the platform. The ladder and platform can be fitted to any Evenproducts tank with galvanised roof. Ladder and handrail made from galvanised steel construction.

Access Ladder and Handrail Kit

Code	Description	Price
TKLDK/2	Ladder for 1.52M High Tank	€1,342.30

TKLDK/6	Ladder for 4.57M High Tank	€6,137.90
THK	Handrail Kit	€984.20

Pipe enclosures

These can be attached to the side of any Evenproducts tank to enclose the pipe work from the base of the tank to the top. The enclosure can be lagged to help to prevent freezing of the pipe work and also works as a safety feature to prevent vandalism and tampering with the pipework. Made from galvanised steel but can be powder coated to any colour.

Hansen Leveller Valve

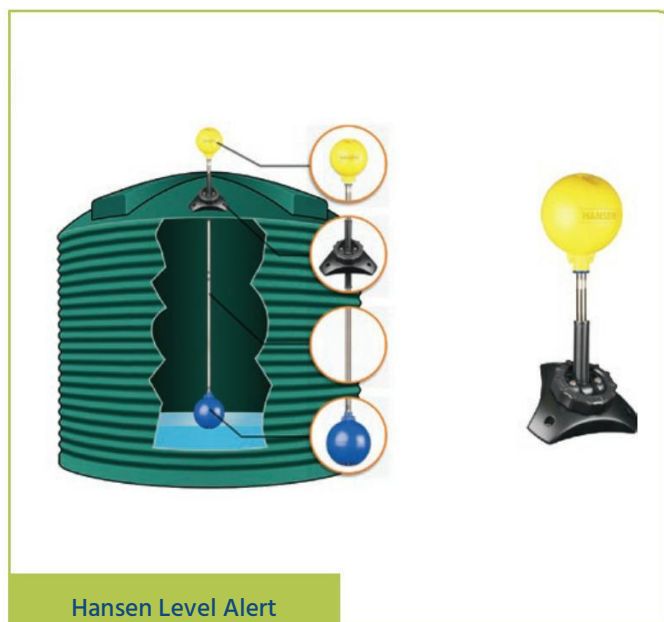

Enables you to set a minimum and maximum water level when filling your tank with a pump.

Lengthen your pumps life with less on/off cycles. Prevent pump burnout caused by dry tank syndrome. Combine with rain harvesting to take advantage of nature's reserves.

Comes with adaptor for 1 1/4, 1 1/2 and 2"

Hansen Leveller Valve

Tank Bases

(UK full concrete base requirement)

Concrete base can be square, octagonal or round. The base must be a minimum of 600mm larger than the tank diameter. The surface should be level over it's entire surface and be reasonably flat (smoothing not necessary). The finished surface must be free from any sharp protrusions, crevasses or cracks, which over time could cause damage to the installed tank liner.

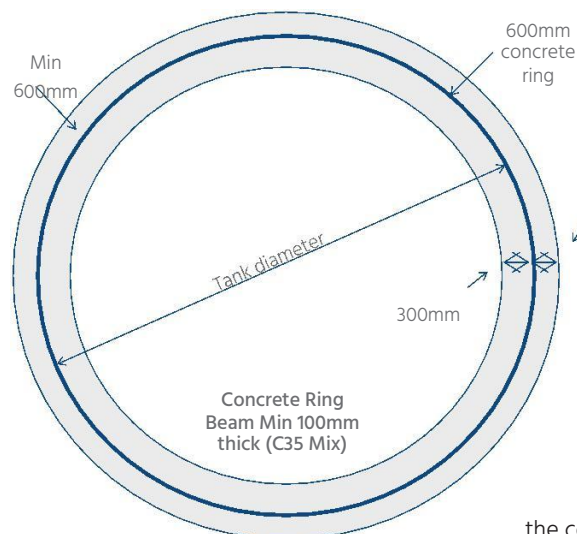

Drawing below shows the traditional method for cushioning of the liner. Other methods of cushioning the liner can be deployed, as advised in the storage tank installation manual. (eg. HD polythene sheet from the tank wall on to the base, with the sand on to the polythene sheet or the fitting of an overlapping layer of geotextile fleece, down from the tank wall across the entire tank base).

Base Requirements

Tank Ring Base (concrete ring beam —min 100mm thickness) (for installation on firm (stable) ground)

Note: For tanks to be installed where ground conditions are soft or unstable, the concrete ring beam should be expanded to a minimum of 1000mm in width and 150mm in depth. The hardcore infill may also require an increase in depth to 200mm.
